

## Description

HAN/HAF ejectors can be used in both industrial and residential buildings.

Air is ejected vertically upwards so as to prevent air pollution near and on the roof. The ejector is efficient enough to place fresh air intakes close nearby.

Typically, these ejectors are made of galvanised sheet metal, but upon request they can also be made of acid-proof steel, aluminium or steel coated with plastics in various colours. The ejectors are 1/2 covered with mesh and furnished with an internal snow or rainwater chute flange.

Typically, HAF ejectors are manufactured with an FLS flange.

Typically, HAN ejectors are manufactured with a male or female flange.

### Example identification

Product code: **HAN** - **aaaa**

type \_\_\_\_\_  
fitted directly onto the fittings, in the duct,  
on the duct

Ød<sub>1</sub> \_\_\_\_\_

### Example identification

Product code: **HAF** - **aaaa**

type \_\_\_\_\_  
installed via a flange

Ød<sub>1</sub> \_\_\_\_\_

## Dimensions

H = installation height

### HAN/HAF

Ød <sub>1</sub> [mm]	ØD [mm]	H [mm]	weight HAF [kg]	weight HAN [kg]
100	180	220	1,1	0,7
